Lectern II

Contents

Features

Do you need a quick solution to record your presentations or lectures? Give you quick and easy playback without using a lot of storage space? [Lectern II](#) can help you accomplish these goals by minimizing the equipment and operational cost associated with presentation recording and post-processing. You can quickly replay and post your content for those waiting for the information. By avoiding video capture, you will be able to save on costly storage and archiving space and your audience will be benefit by the minimum bandwidth required. Lectern II employs the touch-sensitive screen technology to build a "digital desk" offering you effective voice, slide, and pen annotation data capture during a live presentation.

Features

- Slides can be prepared using any Windows applications that support printing.
- During recording, slides can be switched, remarks can be drawn and all voice and pen movements are captured.
- If required the integrated editor allows you to cut and combine different lectures after recording. Recordings can be uploaded to the web in a few simple steps. Keywords contained on the slides are provided for search engines
